PROFILE

Backend Developer with expertise in Java, Python, React, Flask, and SQL Alchemy, specializing in the creation of efficient and scalable systems. My understanding of application architecture enables me to design robust solutions tailored to client needs.

Committed to technical excellence, I continuously strive for improvement and optimization of systems. With significant experience in web development, including individual and collaborative Front-End and Full-Stack projects, I focus on logical problem-solving, performance optimization, and code cleanliness to ensure reliable applications.

SKILLS

Back-end | Full-stack | Front-end | Java | Python | React | Flask | SQL Alchemy | JavaScript | HTML
CSS | API | Bootstrap | SQL | Software Systems | Application Architecture

PROJECTS

StarWars Blog Reading List 🔗

HTML | CSS | Bootstrap | React | ApiRest

Project focused on URL configuration and routing, creating two essential views: a list and an individual one (for example, spaceships). I ensured the correct configuration of the URLs in the router and the retrieval of information when loading the respective views. Additionally, I implemented the Context API for the Model-View-Controller (MVC) design, efficiently handling storage, visualization, and actions.

Web and mobile management system 🔗

Java | Kotlin | OracleSQL | JWT | ApiRest | HTML | CSS | Bootstrap

I played a specialized role in the backend of a Full-Stack project for the management of educational institutions, collaborating with a team of 2 developers. I focused on the robust and efficient implementation of server logic, ensuring solid performance and effective database management. This contribution resulted in a comprehensive platform that allows administrators to register students and teachers, providing functionality for various roles.

Snapify 🔗

Python | Flask | SQLAlchemy | ApiRest | JWT | PostgreSQL | React | Bootstrap | HTML | CSS

Full-Stack web development project focused on photography contests, where I took on a specialized role in the backend, collaborating with a team of three developers. My focus was on implementing robust and efficient server-side logic, ensuring solid performance and effective database management. This dedication to the backend contributed to the creation of a smooth and comprehensive platform where participants can register, upload images, participate in contests, and customize their experience, thus providing a comprehensive solution for photography enthusiasts.

EDUCATION

Bachelor of Science in Information Technology

UTEC 🔗

Training in various programming languages, databases, project management, testing, and infrastructure.

03/2022 – present

Durazno, Uruguay

Bootcamp Full Stack Development

4Geeks Academy 🔗

Development of applications using JavaScript with React and Python with Flask and SQLAlchemy.

09/2023 – 01/2024

LANGUAGES

Spanish (native) | English (B1)
